

WebNMS

Education Program

Igniting minds

Network Management Systems

Remote Operations Management

Element Management Systems

Course Overview

A two-week prototyping assistance program focusing on providing technical assistance for building a prototype of the management application based on WebNMS Framework. A demonstrative working model based of the management application based on the key requirements will be the objective of the program.

Benefits

- Kick-start your application development and minimize the learning-curve for your developers
- Discuss your requirements with our experts vis-à-vis product usage and deployment
- Gain first-hand development experience under the guidance of our product expert (through building a demonstrative working model or a prototype of the EMS)

Intended Audience

- Network Management Architects and Developers building solutions with WebNMS Framework or evaluating Web NMS for a possible purchase

Prerequisites

- Experience with Java and XML development
- Requirements specification for the prototype to be developed covering Modeling, Discovery, Visualization and FCPS requirements.
- Lab setup with working version of the device or simulation and related mibs/command sets or syntax etc.

Prototyping

A Web NMS consultant will guide the development team in building a basic working model or prototype that will cover one specific type of NE or part of it depending on the time constraints and complexity involved. Prototyping will focus on:

- MO Modeling and Deep Discovery
- Visualization scheme
- FCPS working model

How to Enroll

Register through our secure Web site anytime, anywhere, <http://www.webnms.com>

Instructors

WebNMS's training program aims to live by our "Excellence Matters" motto. Our training instructors and guest speakers are people who have vast experience in the area of network management.
